OBJECTIVE

"I'm a dedicated Flutter developer passionate about crafting exceptional mobile applications. My expertise lies in creating cross-platform solutions that seamlessly run on Android and iOS devices. I deeply understand Flutter's widget customization, state management, and API integration, ensuring that the apps I build are visually appealing and highly functional. With a keen eye for detail and a commitment to delivering top-notch user experiences, I'm enthusiastic about turning ideas into polished, responsive, and user-friendly mobile apps. Let's collaborate and bring your mobile app vision to life!"

TECHNICAL SKILLS

- Flutter
- Firebase
- Rest-Api
- Python – Flask
- Data Structure
- Dart
- PHP
- HTML-5
- Android
- MS Office
- MySQL
- C
- Figma

SKILLS

- Communication Skill
- Creative Thinking
- Quick Learner
- Team Work

WORK EXPERIENCE

- FLUTTER FULL-STACK DEVELOPER
  SOFTRONIICS
  06/2023 - Present, Kozhikkode
  Role:- Developer, Flutter Trainer , Data structure, Time Management, Team lead

PROJECTS

- **Qhire**
  Q-Hire is an online platform that connects employers, job seekers, and job providers. Employers can post job positions and search for potential candidates, while job seekers can search for positions and apply online. Q-Hire includes tools such as resume builders, job search engines, job alerts, and areer advice to help job seekers find and apply for jobs.
  Q-Hire contain both webpart and Application part using Flutter and Android studio, PHP, MySQL.
  Github:- https://github.com/Snehae15/qhire

- **STORIES IN YOUR HAND**
  This project is an online reading and writing platform with an easy-to-use interface. This platform helps readers feel free to read posts, and authors can view their posts and others, making it a versatile platform for reading and writing anywhere on the internet.
  Website for online reading using PyCharm, Flask framework, HTML and MySQL.
  Github:- https://github.com/Snehae15/Stories-in-your-hand

- Chat App – Flutter Firebase
  A Firebase chat app utilizes Google's Firebase platform for real-time communication between users. With features like Firestore for database management, Firebase Authentication for user login/signup, and Firebase Cloud Messaging for notifications, it offers a seamless chatting experience across devices. |Front end: Flutter |Backend: Firebase
  Github:- https://github.com/Snehae15/firebase_chatapp

- Near By Stores
  Flutter app for nearby stores allows users to find and buy products from local stores. Users can browse store listings, make purchases, and track orders. Store owners can manage products and view customer orders, streamlining the shopping process for everyone involved. |Front end: Flutter |Backend: Firebase | Github : - https://github.com/Snehae15/near-by-stores

- Campus-recruitment
  A Firebase and Flutter-based campus recruitment app streamlines the hiring process for companies and job seekers. Companies can post job listings, manage applications, and schedule interviews. Job seekers can search for openings, submit applications, and track their progress. Real-time updates and notifications enhance communication between both parties, creating a seamless recruitment experience. |Front end: Flutter |Backend: Firebase
  Github:- https://github.com/Snehae15/campus_recruitments

- Talent – hub
  Created and implemented Talent Hub App, an e-commerce platform fostering entrepreneurship among college students by providing avenues for selling, purchasing, and renting items. Facilitated donations of academic essentials. Designed five-module system and managed user roles. Empowered students financially and promoted skill utilization within the college community. |Front end: Flutter | Backend: Firebase | Github- https://github.com/Snehae15/talent-hub

- Daily wages –
  Front end: Flutter | Backend: Firebase | Github- https://github.com/Snehae15/daily_wages

- Colleageues -app
  Developed College Event Management App, a versatile solution for seamless event organization within the college community. Designed and implemented four distinct modules catering to administrators, hosts, teachers, and students. Key features include event creation, streamlined event reporting, and attendance tracking. Improved communication and collaboration, enhancing the overall event management process.
  Front end: Flutter | Backend: Firebase | Github: - https://github.com/Snehae15/colleagues-app

- Fine arts-
  Front end: Flutter | Backend: Firebase | Githhub- https://github.com/Snehae15/fine-arts

- Crime dispose –
  Front end: Flutter | Backend: Firebase| Github:- https://github.com/Snehae15/crime-dispose

- Vehicle portal –
  Front end: Flutter |Backend: Firebase
  Github:- https://github.com/Snehae15/vehicle_portal/tree/master

- Go share-Vehicle pooling App
  Front end: Flutter | Backend: Firebase | Github:- https://github.com/Snehae15/go_share

- **Alcohol detection and prevention with ignition lock**
  It is a IOT Project that detects drunk driving within the vehicle itself. Our system uses an alcohol sensor with a raspberry pi, a mobile GPS to locate the user, and LED lights to indicate vehicle motion. The system also stops the LED power supply to demonstrate engine locking, preventing drunk driving incidents automatically.
  Contain both web and application part using PyCharm, Django framework, HTML and MySQL

EDUCATION

- **Master of Computer Application**
  APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY   **2021-2023**
- **Bachelor of Computer Application**
  UNIVERSITY OF CALICUT   **2018-2021**
- **Class XII**

          2016-2018

AWARDS AND CERTIFICATIONS

- Quarter Performance Certificate
  Issued by :- Softroniics | Date: 30/3/2024
  Description: Recognizes exceptional performance and achievements during January 2024- March 2024.
- NPTEL Online Certification on Introduction to Internet Of Things
- NPTEL Online Certification on Cloud Computing

INTERNSHIP

- Flutter Developer
  Feb 2023 – Jun 2023
  Skills: JSON · Mobile Application Development · Android Studio · REST APIs · Firebase · Dart · Postman API · Flutter · HTML5 · Cascading Style Sheets (CSS) · PHP
